4duino MPU-6050 Module 3 Axis analog gyro sensors

B-57 (B125)

The MPU6050 contains both a 3-Axis Gyroscope and a 3-Axis accelerometer allowing measurements of both independently, but all based around the same axes, thus eliminating the problems of cross-axis errors when using separate devices.

Specification:

Accelerometer ranges: ± 2 , ± 4 , ± 8 , $\pm 16g$ Gyroscope ranges: ± 250 , 500, 1000, 2000 °/s Voltage range: 3.3V - 5V (the module include a low drop-out voltage regulator) Arduino interface article >HERE<

This simple module contains everything required to interface to the Arduino and other controllers via I2C (use the Wire Arduino library) and give motion sensing information for 3 axes - X, Y and Z

Includes both straight and 90 degree header pins.
